NOTES ON RINGAROUND

NRO REVIEW
COMPLETED

1. Participants briefed on project at 1000 on 20 March 1967.
2. Exercise conducted in TID area 21-24 March 1967.
3. Thirty-three participants including two with slight R-G color defect (record sheets attached to score sheets).
4. [redacted] Light Tables were used for the exercise. The Kelvin temperature ranged from 9,500°K to 12,500°K. The intensity ranged from 800 to 1200 foot lamberts. The temperatures and intensity of the tables used for the individual exercise are recorded on the top right corner of the score sheet. This information was not recorded for the first nine participants but their scores are included.
5. Square chips (0.8") and 7X magnifications were used for the exercise.
6. Certain reproductions were not used. The tally sheets indicate those that were not used.

SUBJECT: NOTES ON RINGAROUND

10. Each participant required approximately five hours to complete the exercise. There are isolated instances where the participant did not make selections for each series.

11. No attempt has been made to correlate the results of this exercise. It is noted, however, that the present "aim point", or reference, appears adequate until the final results are tabulated. A cursory tally indicates that the densities appear generally heavy.

12. The color temperature of the light source naturally influenced the selections. Expert knowledge will be required to adjust these selections to make the results more meaningful.

13. The tally sheets indicate the preference given each selection. EXAMPLE: [redacted] indicates that reproduction #01 was never selected in the first five choices; reproduction #02 was selected first choice once, second choice three times, third choice once, and fifth choice once. Reproductions #03, #04, #06, #09, #16, and #20 were not used for the exercise. Three of the first four choices were the reference chips.

25X1A

14. All material is being returned to you for analysis. Please return this material when practical.
